

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log(2x) + \log(x - 5) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log(2x) + \log(x - 5) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log(2x) + \log(x - 5) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_4(x + 12) - \log_4 x = 3$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_4(x + 12) - \log_4 x = 3$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_4(x + 12) - \log_4 x = 3$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_2 x + \log_2(x + 2) - \log_2(2x) = 3$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_2 x + \log_2(x + 2) - \log_2(2x) = 3$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_2 x + \log_2(x + 2) - \log_2(2x) = 3$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log(5x) + \log(x - 1) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log(5x) + \log(x - 1) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log(5x) + \log(x - 1) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\ln(x + 3) + \ln x = 1$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\ln(x + 3) + \ln x = 1$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\ln(x + 3) + \ln x = 1$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_3(x - 9) + \log_3(x - 3) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_3(x - 9) + \log_3(x - 3) = 2$$

Solve each equation for x . Remember to condense to a single logarithm first! Are any solutions extraneous?

$$\log_3(x - 9) + \log_3(x - 3) = 2$$
